WeNefro®
- Palatable Paste

WeNefro® is a complementary food composed of substances that help support renal function in cases of Chronic Kidney Disease in Dogs and Cats.

Composition WeNefro®
Rheum officionale Rhubarb
Plantago ovata Psyllium
Oxycantha Crataegus Hawthorn
Calcium carbonate
Magnesium carbonate
Vitamin B6
Vitamin B9 (folic acid)
Vitamin B12

Composition of 2 milliliters of WeNefro®
150 mg
150 mg
71.4 mg
20 mg
19 mg
10 mg
400 µg
200 µg

WeNefro® is a palatable edible paste that can be administered directly into the mouth or added to the animal feed. The administration period should be set by the veterinarian. It is recommended to consult a veterinarian before use. Do not exceed the recommended dose. This product should not be used as a substitute for a varied diet.

Therapeutic recommendations and doses:
Dogs and Cats:
1 ml per 4 kg of animal body weight, twice daily (1 ml is equivalent to pressing the bottle once the pump device).

Presentation:
Bottle dispenser 100 ml palatable paste.
Net Volume: 100 ml.

**WeNefro®**

**WeNefro®** combines a group of substances that provide ample control of degenerative processes leading to the progression of CKD.

Able to reduce the development of fibrosis, as well as reduce hyperphosphataemia and uremia, assist in the control of blood pressure and intestinal transit, and still provide essential vitamins for this condition. WeNefro allows a **MULTISUPPORT** approach for the treatment of CKD.

---

**The Chronic Kidney Disease (CKD) is common in older dogs and cats, is even the most common kidney disease in geriatrics.**

It is established when there is functional and/or structural damage of one or both kidneys and when it is present for more than 3 months.

In most patients with CKD, there are structural and functional loss. However, this loss is not always observed.

CKD generally complicated by pre- and post-renal causes which, when controlled, has great impact on disease control.

The progressive character of the disease requires close clinical monitoring, as well as treatment adaptations and adjustments when necessary.

It is essential to control aspects of the disease such as proteinuria, hyperphosphatemia, hypertension and uremia.

WeNefro® allows a **MULTISUPPORT** approach for the treatment of CKD.
